

## Easy File Exchange

Using your email system to send files can be a big headache, with message size limits, and huge server storage backups. The alternative - setting up users with FTP - is just as bad, since it's time consuming, insecure and very support intensive.

When cumbersome to exchange, users will resort to other means. Under pressure to get their business done, they will find easily accessible, consumer-based services to send files, while putting your organization at risk.

DataMotion Secure file Transfer is easy to use and increases user productivity. Now your users can get their work done, and you can rest assured everything is secure.

## Simple and Secure

DataMotion Secure File Transfer makes it easy to send and receive files securely, while giving administrators full visibility. It simplifies file exchanges with customers and partners through straightforward methods like file attachments and drag and drop.

With no training or software needed, it's easy to get up and running quickly, and even easier to support. The solution also allows your applications and systems to easily participate, enhancing their capabilities, saving you time, and adding to the bottom line. It's streamlined, secure and smart.

## Secure and in Control

Secure data exchange is a legal requirement to comply with industry regulations like HIPAA, HITECH, and PCI. DataMotion Secure File Transfer gives you assurance that sensitive information is being encrypted. Central tracking and reporting provide visibility into all transfers – making it simple to prove Service Level Agreements and demonstrate compliance. Now, all transfers – internal and external – can be managed and controlled.

- Increase employee productivity
- Reduce IT Admin headaches due to FTP transfers
- Increase visibility and security of file transfers
- Recognize immediate cost reduction, improve your bottom line, and increase your business's competitive advantage
- Reduce your exposure to compliance violations, litigation and penalties

## FEATURES

- User-initiated transfers – up to 2 GB
- Integrated encryption – no separate key management
- Centralized administration
- End-to-end tracking and reporting
- Public or private cloud
- Integrates with DataMotion SecureMail
- Configurable file expiration
- Co-branded web portal
- Built on open standards
- Tools to integrate with existing workflows

## BENEFITS

- Up and running in minutes
- Visibility and control of all file exchanges
- Increased compliance
- Increased user productivity
- Easy for users and IT administrators
- Lower support costs
- No scripting or custom development required
- Overlays your existing systems - no rip and replace
- Leverages tools your partners and end users already have in place

## Additional Technical Specifications

- + Standard-based encryption: AES, SSL
- + Transport protocols: SFTP, FTPS, FTP, HTTPS, SMTP, POP3 TLS, SSL
- + Extensive browser and email client support
- + Smartphone and tablet support
- + SSAE 16, SAS 70 Type II Certified Data Center

“With the volatility of the economy, companies are looking to efficiently share, secure, audit and manage the movement of information from point to point. Having a platform that automates some of these governance processes without the expense of additional hardware or expensive integration middleware – means companies can be more transparent and confident that they are compliant with industry, regional and legal regulations and mandates.”

– Frank Kenney,  
Research Director, Gartner
