

Talking Stick

High quality, 30FPS video for Adobe® Connect™

The Difference is Clear

Are you disappointed with the video quality of the Adobe Camera pod? Have you ever wished you could improve it? How about having the ability to turn attendee cameras on and off remotely or to preview a camera without showing it to the entire meeting room? Would you like to show one speaker's video larger than the others or allow viewers to choose which stream should be larger? Is the ability to stream external feeds from studio cameras, camcorders or other devices not physically connected to your computer of interest? Have you ever wished you could play pre-recorded videos back and give attendees the right to pause and play them at will? If you answered "Yes" to any of these or have other specialized video broadcast needs, Talking Stick is the solution you've been dreaming of.

High-quality, live 30 FPS video

Picture-in-Picture and previews of remote cameras

Unlimited live and pre-recorded streams

Studio-quality titling and watermarks

Login to your Talking Stick Manager at RefinedData.com/TalkingStick

Talking Stick is perfect for:

University Lectures

Webinars

Focus Groups

Training Environments

Live Event Broadcasting

Medical Procedure Demonstrations

Sales Presentations

Group Discussions

Coaching

Town Hall Meetings

Plus:

Hosts/Moderators can activate and deactivate any speaker's camera feed remotely without requiring their intervention.

Not limited by bandwidth restrictions imposed by Adobe in the current Camera pod so the Video stream is fast and remains in sync.

Direct control of Tracker Pod and Motor Pod devices from Eagletron. Now you can Pan, Tilt and Zoom from anywhere on the planet!
